

THE SANCTUARY HOUSE

Introducing The Sanctuary House — a premium modular home by HomeQube.

Its design language is directly informed by the recent exhibition “Sanctuary of Becoming” by artist Ciane Xavier, which explored transformation, regenerative biomaterials, and mycelium-based architecture.

For those who’ve seen the exhibition, the Sanctuary House carries that same sensibility into real construction—built with GFRP, Fiber Metal Laminates, and mycelium components for a home that feels both engineered and organic.

A house that behaves like a contemporary art piece:

lightweight, resilient, regenerative, and emotionally calm.

A sanctuary you can actually live in.

If you want to understand the spirit behind this design, we invite you to experience “Sanctuary of Becoming.”

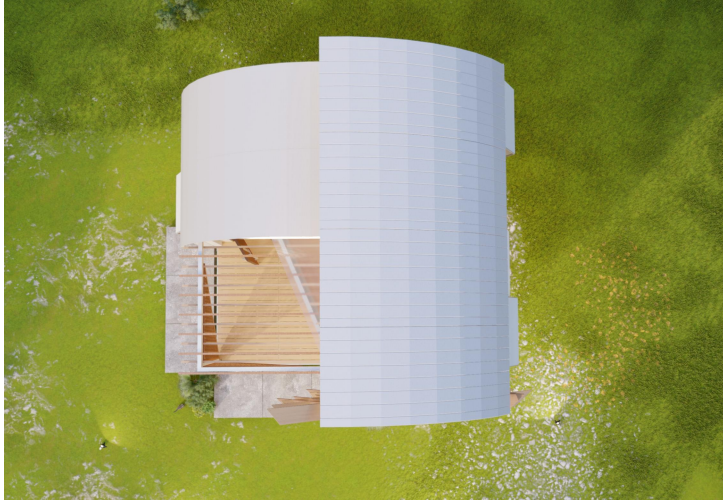

Then see how its ideas have evolved into a livable architectural object through HomeQube.
